BLUEPRINT

For a better South Africa

BLUEPRINT FOR A BETTER SOUTH AFRICA

1. Smaller, More Efficient Government

1. Elect a parliament that will spend much less. Close down useless government departments, introduce spending priorities.
 2. Move the state out of the economy. Privatize state owned enterprises.
 3. Bring an end to the numerous useless government Boards.
 4. Reward merit.
-

2. Economic Growth and Job Creation

1. Focus on job creation by turning South Africa into an attractive investment destination. (Investors create jobs, the state and career politicians do not). Essential for job creation is less red tape, scrapping of all restrictive labour laws and drastic reduction in taxes (reduce company tax to 15%, personal income tax to maximum 35% and dividend tax to 10%). Increase the primary rebate to R300 000,00 per year meaning those who earn less than R300 000,00 do not pay personal income tax. Increase the limit on tax free interest to R200 000,00 per year. Encourage saving and frugality.
 2. Stop the punitive taxes on hard work. Rather reward hard work and commitment with generous tax breaks.
 3. Encourage private education, augmented by online training.
-

3. Infrastructure and Energy

1. Tax incentivize the generation of clean energy by individuals and companies. Encourage and incentivize the biggest industrial and mining users of electricity to meet their own energy needs.
 2. Privatize ports and rail.
-

4. Road Accident Fund Reform

1. Draw a line under the ANC disaster that is the insolvent Road Accident Fund and all its ballooning contingent liabilities and replace it with compulsory third party insurance for all vehicles on the road, meaning the private insurance industry has to deal the legal sequelae of road traffic accidents.

5. Healthcare

5.1 Structural Reform

1. Go for private healthcare (the state cannot be trusted with your health). Establish a medical aid for every citizen, one comprehensive medical aid plan from birth to death, underwritten by a health insurance fund. Which for its part is funded by the existing department of health budget. No new tax is proposed. We suggest that the current dysfunctional department should be closed down.

5.2 Hospital and Medical Aid Administration

2. All state hospitals should acquire the necessary IT systems to also claim from medical aids.
3. Medical aids should be administered by the private medical aid industry.
4. Hospitals should be operated and managed by private health companies.
5. Bring an end to the useless, rip-off Mickey Mouse medical aid plans on the market.
6. Parliament exercises direct oversight over the health insurance fund (HIF) and set fees of doctors, surgeons, physiotherapists, dentists, psychologists, optometrists etc.

6. Community Service

6.1 National Service Programme

1. Introduce national and community service (not military service) for all university, college and artisan graduates, thereby creating certainty of employment after graduation.

6.2 Skills Deployment

2. All financial management and accounting graduates should be seconded to municipalities and city councils where financial know how and administrative skills are in desperate short supply.
 3. All education and humanities graduates should be required to provide adult training and education programmes for grant recipients.
-

7. Property and Home Ownership

1. Boost home ownership. All property transfer, finance, energy installation, security and maintenance costs, all salaries and wages of domestic workers and gardeners and all fully paid up utility bills should be 100% deductible from personal income tax.
 2. Introduce national legislation to force local authorities to become the buyer of last resort should a property owner not be able to sell his property in the open market for a price at least equal to the valuation attached by local authorities to his/her property.
-

8. Broadening Ownership

1. Aim for a society of more shareholders. Introduce equity participation, a voluntary company and owner centered programme, designed to elevate meritorious employees to part ownership.
-

9. Transformation and Skills

1. Scrap BEE which is simply corruption by another name.
 2. Tax incentivize the return of South Africans from abroad. We need their skills and passion to build a prosperous South Africa for all.
-

10. Immigration Policy

1. Introduce a Settlement or Visa Fee for all foreign nationals in South Africa, anything from R50 000,00-R100 000,00 per year for every man, woman and child in South Africa.
 2. Employers who pay the Settlement or Visa Fee of essential foreign workers should be allowed to fully deduct this as a business expense.
-

11. Rights, Security and Governance

1. Respect individual human rights.
 2. Consolidate the National Defence Force into a streamlined professional force, fit for purpose.
 3. Devolve the SAPS to the provinces.
 4. Expand a South African data bank. Cross reference biometric data, ID number, tax number and medical aid number with voter's roll.
 5. Restore the rule of law and find the billions captured and stashed abroad.
-

12. Debt Reduction and State Assets

1. Sell unused state land and buildings and use the proceeds to redeem the gargantuan sovereign debt of R5,2 Trillion plus (R5 200 000 000 000,00).
-

13. Welfare Reform

1. Stop the funding of indolent lazy sloths whose only productive past time is reckless procreation.
 2. Make grants conditional upon ongoing participation in adult education and training programmes.
-

Vision

- More jobs. Millions more.
- Lower taxes.
- End punitive taxes on hard work.
- More home owners
- More shareholders.
- Better education.
- Law and order.
- Foreigners pay for the privilege of living in South Africa or are required to leave.
- More tax payers
- More prosperity all round.
